PROFESSIONAL SUMMARY

Computer Science student and junior developer with hands-on experience building back and front of the web, automation tools & workflows. Experienced in deploying, maintaining, and monitoring applications on Linux servers. Passionate about building scalable web applications and transforming repetitive workflows into reliable, automated solutions.

PORTFOLIO → nikushaavsajanishvili.com

TECHNICAL SKILLS

Programming:
Python, JavaScript, SQL, Bash, Typescript
Databases:
PostgreSQL, MongoDB
Systems & Tools:
Docker, Linux, Git
Backend & APIs:
FastAPI, REST APIs
Web Development:
HTML, CSS, JavaScript
Devops & infrastructure
Prometheus, Grafana, Nginx, CI/CD

PROFESSIONAL EXPERIENCE

Rento.ge
2024 – Present

Internal Process Improvement

- Updated website content and service information to keep customer-facing details accurate and up to date.
- Handled customer requests and helped resolve service-related issues.
- Improved routine workflows by identifying recurring issues and simplifying day-to-day tasks.

PROJECTS

Price Monitoring Automation | tracktech.ge
GitHub

Python, PostgreSQL, REST APIs, nginx

- Built a website to compare iPhone prices across Georgian online stores.
- Automated price collection and tracking to detect price changes over time.
- Stored product data and price history in PostgreSQL and built API endpoints to access them.

Video Downloader
GitHub

Python, FastAPI, PostgreSQL, SQLAlchemy, Docker

- Developed a REST API for handling video downloads through asynchronous background tasks.
- Used PostgreSQL to store download information and track processing status.
- Structured the application into separate components for easier maintenance and debugging, and containerized it with Docker.

EDUCATION

Alte University
2024 – Present

Bachelor of Computer Science — third-year student
