Nikusha Avsajanishvili

Full-Stack Developer | AI automation | Computer Science Student

Tbilisi, Georgia | +995 555 32 71 74
GitHub | LinkedIn

PROFESSIONAL SUMMARY

Third-year Computer Science student and full-stack developer focused on web applications, automation, and AI. I build complete products, from the database and REST APIs to the user interface, and turn real everyday problems into working tools. I automate repetitive processes wherever I can and use AI as a development tool to write, debug, and learn faster.

VIEW PORTFOLIO → nikushaavsajanishvili.com

TECHNICAL SKILLS

Languages:
Python, JavaScript, TypeScript, Bash, SQL

Backend & APIs:
FastAPI, Node.js, REST APIs, Pydantic, SQLAlchemy

DevOps & Infrastructure:
Docker, Docker Compose, Nginx, GitHub Actions (CI/CD), AWS, Linux, Git

Automation & AI:
Web Scraping, Scheduled Jobs, LLM APIs, AI-Assisted Development

Frontend:
React, HTML, CSS, Responsive UI

Databases:
PostgreSQL, Alembic Migrations

Monitoring & Testing:
Prometheus, Grafana, pytest

Soft Skills:
Attention to Detail, Communication, Research & Curiosity

PROJECTS

iPhone Price Tracker — Georgian Market — GitHub

Python, FastAPI, async SQLAlchemy, PostgreSQL, Alembic, Docker Compose, Nginx

- Built a price-comparison platform with retailer-specific scrapers that import listings from multiple Georgian stores (Zoommer, Alta and more) into one searchable catalog, replacing manual store-by-store checks.
- Recorded every price change to give each model its own price history, and logged the outcome of every crawl.
- Implemented user accounts, product tracking, and target-price alerts delivered through Telegram; documented the REST API with Swagger UI.
- Containerized the stack with Docker Compose and Nginx, and covered the API with pytest and HTTPX tests.

Asynchronous Video Downloader — GitHub

Python, FastAPI, SQLAlchemy, PostgreSQL, Docker, Prometheus, Grafana

- Built a web app that downloads videos from YouTube and other supported sites in 360p, 720p, or 1080p using yt-dlp.
- Processed downloads asynchronously with FastAPI background tasks while PostgreSQL tracks each job's status, shown live in the frontend.
- Exposed a Prometheus metrics endpoint and Grafana dashboards to monitor application health and performance; deployed with Docker.

JobRadar GE — AI Job Matching — In progress

React, TypeScript, FastAPI, PostgreSQL, LLM API, Web Automation, Docker

- Building an AI-powered job radar: scheduled scrapers collect new postings from Georgian job boards into one PostgreSQL database.
- AI compares each posting with the user's CV, scores the fit, and explains why; strong matches trigger an email with a tailored, AI-drafted cover letter.
- React and TypeScript dashboard for browsing matches, fit scores, and generated cover letters.

EXPERIENCE

Rento.ge — 2024 – Present

Web Development & Operations

- Updated website content and service information to keep customer-facing details accurate and up to date.
- Handled customer requests and helped resolve service-related issues.
- Improved routine workflows by identifying recurring issues and simplifying day-to-day tasks.

EDUCATION

ALTE University — 2024 – Present

BSc in Computer Science — third-year student, focused on algorithms, data structures, and software engineering

LANGUAGES

Georgian: Native

English: Professional Working Proficiency (C1)
